

x:pandaTM

x:panda is a multi-adjustable seating system that can be configured to meet a range of postural requirements and to accommodate growth. Its dynamic back allows a child to extend and push back against relatively light resistance. It is available in 4 sizes.

FABRIC

The x:panda has a unique dynamic back that absorbs the energy of extension

Multi-adjustable

Overlap in sizing means that the starting option always offers the maximum growth potential coupled with individual leg positioning to offer an improved base of support and additional support for maintaining the correct degree of abduction/adduction if required

Back recline

The patented articulation of the back rest has been designed to eliminate shear and sliding during extension. This means that support remains uniquely in position during movement improving functionality and comfort for the user

Growth

Individual growth in width, depth and back height extends the life of the seat and accommodates the greatest range of sizes for any chair on the market
